# What I Deliver

I build and deliver **automated, enterprise-grade analytics reports** as branded PDF documents. Every report is powered by a production analytics platform with star-schema data warehousing, automated ETL pipelines, machine learning models, and rigorous quality assurance.

You get the output of a full data engineering team — without hiring one.

## Branded PDF Reports

Professional, presentation-ready PDFs with your company name, colors, and branding. Executive summaries, KPI dashboards, risk assessments, and actionable recommendations.

## Real Data, Real KPIs

Reports are computed from live API data — not templates with placeholder numbers. Every metric is auditable back to its source.

## Machine Learning Intelligence

4 production ML models add predictive signals: momentum classification (78% accuracy), Value-at-Risk, volume anomaly detection, and explainable AI (SHAP).

## Enterprise Compliance

Sign-off workflows, immutable audit trails, full data lineage, multi-currency support (20+ currencies), and regulatory-grade formatting.

# How It Works

1

### SCOPE

You tell me what you need: assets, tickers, facilities, teams, time period, KPIs of interest.

2

### EXTRACT

Automated pipelines pull live data from public APIs (CoinGecko, Yahoo Finance, FRED, EIA, ESPN, SEC EDGAR, and more).

3

### COMPUTE

Industry-specific KPIs are computed through tested engines. ML models generate predictions and anomaly alerts. Everything is logged.

4

### DELIVER

Branded PDF report with executive summary, KPI dashboard, ML intelligence, risk assessment, and recommendations. Delivered via email or secure link.

## Data Sources (All Public, No Keys Required from You)

| SOURCE                 | DATA PROVIDED                                                 | VERTICAL           |
|------------------------|---------------------------------------------------------------|--------------------|
| CoinGecko API          | Crypto prices, market cap, volume, supply, historical data    | Crypto             |
| Yahoo Finance API      | Stock prices, OHLCV, financial metrics, intraday data         | Finance, Brokerage |
| FRED (Federal Reserve) | GDP, CPI, unemployment, interest rates, 800K+ economic series | Finance            |
| US EIA Open Data       | Crude/gas production, inventory, pricing, rig count           | Energy / O&G       |
| ESPN API               | Team standings, scores, schedules across NFL/NBA/MLB/NHL      | Sports / Betting   |
| SEC EDGAR              | Company filings, financial facts, full-text search            | Compliance         |

| SOURCE                        | DATA PROVIDED                                                | VERTICAL                        |
|-------------------------------|--------------------------------------------------------------|---------------------------------|
| NREL PVWatts                  | Solar production estimates, radiation, system economics      | Solar / Energy                  |
| Open-Meteo / NOAA             | Historical weather: temperature, precipitation, wind, storms | Weather overlay (all verticals) |
| Bank of Canada, ECB, Eurostat | International macro indicators, FX rates                     | Finance (international)         |

You can also provide your own data (CSV, Excel, JSON) for analysis. Client-supplied data is deleted within 7 days of delivery.

# Service Verticals

## Crypto Portfolio Analytics

30 KPIs • CoinGecko Data • ML: Momentum, VaR, Anomaly Detection

**Who this is for:** Fund managers, family offices with crypto exposure, DeFi protocols, crypto trading desks, LP reporting.

### KPIs Computed

| CATEGORY         | METRICS INCLUDED                                                       |
|------------------|------------------------------------------------------------------------|
| Portfolio Value  | NAV, total return, realized P&L, unrealized P&L                        |
| Allocation       | Asset allocation, top-5 concentration, unique assets count             |
| Risk             | 30-day volatility, max drawdown, Sharpe ratio, Sortino ratio, 95% VaR  |
| Trading Activity | Total volume, trade count, avg trade size, buy/sell ratio              |
| Exposure         | Stablecoin ratio, DeFi exposure, NFT exposure                          |
| Counterparty     | Exchange exposure, custody concentration, counterparty risk score      |
| Advanced         | Liquidity depth, on-chain activity score, portfolio correlation matrix |

### Packages

| STARTER                                                                                                                                                            | PRO                                                                                                                                                                                   | ENTERPRISE                                                                                                                                                                                             |

| <ul style="list-style-type: none"><li>• 10 production + pricing KPIs</li><li>• Per-well anomaly detection</li><li>• Weather overlay</li><li>• Ideal for small operators (1-50 wells)</li></ul> | <ul style="list-style-type: none"><li>• 22 O&amp;G KPIs + weather + solar</li><li>• Multi-field reporting + CSV</li><li>• Full ML + commodity VaR</li><li>• Ideal for mid-size operators, consultants</li></ul> | <ul style="list-style-type: none"><li>• All 30 KPIs + compliance metrics</li><li>• Multi-state regulatory formatting</li><li>• Sign-off + audit trail + GCS archive</li><li>• Ideal for public operators, large E&amp;P</li></ul> |

### White-Label Pricing (Energy Consulting Firms)

| VOLUME               | PER REPORT | MONTHLY MINIMUM |
|----------------------|------------|-----------------|
| 1-9 reports/month    | \$150      | None            |
| 10-24 reports/month  | \$100      | \$1,000         |
| 25-49 reports/month  | \$80       | \$2,000         |
| 50+ reports/month    | \$60       | \$3,000         |
| Unlimited (retainer) | Flat rate  | \$5,000         |

## Sports & Betting Analytics

Team Analytics + 8 Operator KPIs • ESPN + TheSportsDB • ML: Team Momentum, Line Movement

**Who this is for:** Sports bettors, handicapping platforms (Discord/Patreon), sports media, DFS platforms, sportsbook operators (with client-supplied data).

What's Computed

| CATEGORY       | METRICS INCLUDED                                                                                    |
|----------------|-----------------------------------------------------------------------------------------------------|
| Team Analytics | Standings, W/L, point differential, PPG, Pythagorean win expectation, regression analysis           |
| Momentum       | ML-powered team momentum classification (trending up/down/neutral)                                  |
| Trends         | ATS performance, over/under trends, home/away splits, division performance                          |
| Operator KPIs  | Player journey, promo ROI, sharp score, churn risk, liability concentration, cross-sport engagement |

Packages

STARTER

**\$150**/wk

\$400/mo • \$2,500/season

- 1 league, full team analytics
- Pythagorean + momentum signals
- 2-3 page branded PDF
- Ideal for bettors, media freelancers

PRO

**\$400**/wk

\$1,200/mo • \$12,000/yr

- Multi-league (NFL + NBA or any 2)
- White-label ready + CSV data
- Full ML + volume anomaly
- Ideal for platforms, media companies

ENTERPRISE

**\$800**/wk

\$2,500/mo • \$6,000/qtr

- All 8 operator KPIs (client data)
- Sharp detection + churn prediction
- Compliance formatting, sign-off
- Ideal for sportsbook operators

# Machine Learning Intelligence

Every report can include predictive intelligence from 4 production ML models. These aren't prototypes — they run in production with walk-forward backtesting, explainable AI, and model versioning.

**What makes this different from a spreadsheet:** These models are trained on 257,000+ data points, validated with walk-forward backtesting (no look-ahead bias), and every prediction comes with SHAP feature attribution explaining *why* the model made that call.

| MODEL                      | ACCURACY                         | WHAT IT DOES                                                                                                                                                              | APPLIED TO                                                                                                |
|----------------------------|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| <b>Momentum Classifier</b> | 78.3% direction accuracy         | Classifies assets/teams as bullish, bearish, or neutral on a 1-day horizon using 28 engineered features (RSI, MACD, Bollinger Bands, VWAP, volume ratios, market context) | Crypto holdings, equities, commodities, team performance                                                  |
| <b>Scalp Classifier</b>    | 74.7% accuracy                   | Short-horizon (10-minute) direction classification for intraday clients                                                                                                   | Day trading, crypto intraday, options                                                                     |
| <b>GARCH VaR</b>           | 95%/99% calibrated               | Estimates Value-at-Risk using GARCH(1,1) volatility modeling — how much could you lose at a given confidence level                                                        | Portfolio risk (crypto, equity), commodity price risk                                                     |
| <b>Volume Anomaly</b>      | 4.31x lift, 13.2% large-move hit | Isolation Forest + Z-Score anomaly detection — flags unusual volume that precedes large price moves                                                                       | Whale detection (crypto), pre-earnings alerts (equities), production drops (energy), sharp money (sports) |

## SHAP Explainability

Every ML prediction includes SHAP (SHapley Additive exPlanations) feature attribution. This means your report doesn't just say "BTC is bearish" — it says *why*:

**Example from a real prediction:**

"BTC bearish signal driven by: RSI declining from overbought (32% contribution), MACD histogram turning negative (28%), volume ratio below average (19%), VWAP deviation expanding (12%), SPY correlation weakening (9%)."

This is critical for institutional clients who need to **explain decisions to boards, LPs, and regulators** — not just act on a black-box signal.

## Model Infrastructure

| COMPONENT               | WHAT IT DOES                                  | WHY IT MATTERS TO YOU                                                      |
|-------------------------|-----------------------------------------------|----------------------------------------------------------------------------|
| Walk-Forward Backtester | 20-day train / 5-day test / 1-day step        | No look-ahead bias — model accuracy is verifiable, not theoretical         |
| Model Registry          | Database-backed versioning + artifact storage | Every prediction is traceable to the exact model version and training data |

Feature Store

| COMPONENT | WHAT IT DOES                           | WHY IT MATTERS TO YOU                                                |
|-----------|----------------------------------------|----------------------------------------------------------------------|
|           | 28 engineered features per observation | Consistent, reproducible inputs — same data = same result every time |

# What You Get With Every Report

| FEATURE                                            | STARTER       | PRO        | ENTERPRISE  |
|----------------------------------------------------|---------------|------------|-------------|
| Branded PDF report                                 | ✓             | ✓          | ✓           |
| Executive summary + recommendations                | ✓             | ✓          | ✓           |
| KPI dashboard with interpretations                 | ✓             | ✓          | ✓           |
| ML intelligence section                            | Basic signals | Full suite | Full + SHAP |
| CSV data export                                    | —             | ✓          | ✓           |
| Google Sheets live sync                            | —             | ✓          | ✓           |
| Custom branding / color scheme                     | +\$100        | Included   | Included    |
| Multi-currency formatting                          | —             | ✓          | ✓           |
| Email delivery with secure links                   | ✓             | ✓          | ✓           |
| Cloud archive (7-day signed URLs)                  | —             | ✓          | ✓           |
| Sign-off workflow (Prepared / Reviewed / Approved) | —             | —          | ✓           |
| Immutable audit trail                              | —             | —          | ✓           |
| Full data lineage documentation                    | —             | —          | ✓           |
| Priority support (24h response)                    | —             | ✓          | ✓           |

## Enterprise Report Structure

Every Enterprise-tier report follows a standardized structure designed to withstand board-level scrutiny:

|                                        |                                    |
|----------------------------------------|------------------------------------|
| 1. Cover Page (client branding)        | 2. Executive Summary (3-5 bullets) |
| 3. Data Overview (sources, freshness)  | 4. KPI Dashboard (visual grid)     |
| 5. Full KPI Table + Interpretations    | 6. ML Intelligence + SHAP          |
| 7. Trend Analysis (period-over-period) | 8. Risk Assessment Matrix          |
| 9. Recommendations (prioritized)       | 10. Methodology & Data Sources     |
| 11. Appendix: Data Lineage             | 12. Sign-Off Block                 |

# Pricing Summary

## Weekly Reports

| VERTICAL                   | STARTER | PRO   | ENTERPRISE |
|----------------------------|---------|-------|------------|
| Crypto Portfolio Analytics | \$250   | \$500 | \$1,200    |
| Financial Analytics        | \$300   | \$600 | \$1,500    |
| Energy / Oil & Gas         | \$200   | \$500 | \$1,200    |
| Sports / Betting           | \$150   | \$400 | \$800      |

## Monthly Reports

| VERTICAL                   | STARTER | PRO     | ENTERPRISE |
|----------------------------|---------|---------|------------|
| Crypto Portfolio Analytics | \$500   | \$1,500 | \$3,500    |
| Financial Analytics        | \$600   | \$2,000 | \$4,000    |
| Energy / Oil & Gas         | \$500   | \$1,500 | \$4,000    |
| Sports / Betting           | \$400   | \$1,200 | \$2,500    |

## Quarterly Reports

| VERTICAL                   | STARTER | PRO     | ENTERPRISE |
|----------------------------|---------|---------|------------|
| Crypto Portfolio Analytics | \$1,200 | \$3,500 | \$8,000    |
| Financial Analytics        | \$1,500 | \$4,500 | \$10,000   |
| Energy / Oil & Gas         | \$1,200 | \$3,500 | \$8,000    |
| Sports / Betting           | —       | —       | \$6,000    |

## Why This Beats the Alternatives

| FACTOR               | FULL-TIME ANALYST               | BLOOMBERG / ENVERUS / MESSARI | THIS SERVICE                      |
|----------------------|---------------------------------|-------------------------------|-----------------------------------|
| Annual cost          | \$85K-\$250K + benefits         | \$24K-\$150K/yr               | <b>\$6K-\$48K/yr</b>              |
| Time to first report | 2-6 months                      | Immediate (raw data)          | <b>1 week</b>                     |
| Output format        | Whatever they build             | Raw data — you build reports  | <b>Finished, branded PDFs</b>     |
| ML predictions       | Need separate data science hire | Basic analytics               | <b>4 production models + SHAP</b> |
| Branding             | Your brand                      | Their brand                   | <b>Your brand (white-label)</b>   |
| Audit trail          | Manual                          | Varies                        | <b>Automated, immutable</b>       |
| Scalability          | 1 person = bottleneck           | Unlimited data, no reports    | <b>Automated pipelines</b>        |

# Getting Started

---

1

## 15-Minute Scope Call

We discuss what you need: vertical, cadence, KPIs, branding. No commitment.

2

## Trial Report

I deliver your first report within 5 business days. You evaluate quality before committing to recurring.

3

## Recurring Delivery

Weekly, monthly, or quarterly — automated and on schedule. Scale up or down anytime.

### Turnaround Times:

**One-off report:** 3-5 business days • **Recurring setup:** 1 week initial, then automated • **Rush delivery:** +50% premium, 1-2 business days

## Ready to talk?

Mboyajeffers9@gmail.com • [linkedin.com/in/mboyajeffers](https://www.linkedin.com/in/mboyajeffers) • [github.com/mboyajeffers](https://github.com/mboyajeffers)

All reports use publicly available data sources. Client-supplied data is handled securely and deleted within 7 days of delivery.

Reports can be white-labeled under your brand. Multi-currency support available for international clients.

Pricing effective March 2026. Custom packages available on request.
