

⚠ **SAMPLE REPORT** — "Harborline Goods Co." is a fictional composite brand built to show report shape and methodology. Every number below is a fabricated placeholder, not a real business's data.

MONTHLY SNAPSHOT

|                                               |                                    |                                            |                                                   |
|-----------------------------------------------|------------------------------------|--------------------------------------------|---------------------------------------------------|
| <div>\$329,688</div> <div>GROSS REVENUE</div> | <div>4,820</div> <div>ORDERS</div> | <div>\$68</div> <div>AVG ORDER VALUE</div> | <div>6.1%</div> <div>REFUND / EXCHANGE RATE</div> |
|-----------------------------------------------|------------------------------------|--------------------------------------------|---------------------------------------------------|

Two hidden costs stand out this month: an estimated \$13,268 in discount code margin given to customers who likely would have paid full price, and a customer base where 29.0% of buyers are brand-new but historically convert to repeat customers at a fraction of the organic rate. Both are addressed on pages 2–3.

WHAT THESE NUMBERS MEAN IN PRACTICE

|                                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                         |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <div>66.0%</div> <div>REVENUE FROM TOP-SELLING SKUS</div> <p>A small slice of the catalog is doing most of the work. The remaining catalog carries listing, photography, and inventory overhead without proportional return — a strong candidate for pruning or de-prioritizing.</p> | <div>6.1%</div> <div>REFUND / EXCHANGE RATE</div> <p>Returns concentrate around mismatched expectations rather than product defects on a catalog with heavy variant choice — a fixable listing/preview problem, not a quality problem.</p> | <div>\$13,268</div> <div>ESTIMATED DISCOUNT MARGIN LEAK</div> <p>Of \$21,400 given away via sitewide promo codes this month, an estimated 62.0% went to customers who would have purchased at full price. Full breakdown on page 3.</p> |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

All figures on this page are illustrative and synthetic, modeled on a "strong month" scenario for a mid-size Shopify DTC brand (\$1–5M/yr range). Harborline Goods Co. is a fictional composite, not a real company — any resemblance to an actual business is coincidental. · Prepared by Mboya Jeffers · mboyajeffers9@gmail.com · Generated August 12, 2026

⚠ **SAMPLE REPORT** — segments, retention curves, and CAC figures below are fabricated placeholders for a fictional composite brand.

#### CUSTOMER SEGMENTATION — REGENCY / FREQUENCY / SPEND

Every customer this month is scored on how recently they bought, how often, and how much — then grouped into segments that call for different treatment. The value of this view is contrast: segments with a small share of customers can carry an outsized share of revenue, and vice versa.

| SEGMENT             | SHARE OF CUSTOMERS | SHARE OF REVENUE |
|---------------------|--------------------|------------------|
| Champions           | 7.0%               | 24.0%            |
| Loyal Customers     | 13.0%              | 21.0%            |
| Potential Loyalists | 15.0%              | 13.0%            |
| New Customers       | 29.0%              | 20.0%            |
| At Risk             | 14.0%              | 11.0%            |
| Hibernating         | 13.0%              | 7.0%             |
| Lost                | 9.0%               | 4.0%             |

**Champions are 7.0% of customers but 24.0% of revenue.** New Customers are the largest single group (29.0%). The question this answers directly: are those new customers being converted into Loyal/Champion status, or sliding straight to Hibernating/Lost?

#### RETENTION — ORGANIC ACQUISITION VS. PAID ACQUISITION

Not all new customers behave the same. Buyers acquired through paid social or affiliate spend typically convert and decay differently than buyers who found the site organically or through search. Illustrative retention curves for each cohort type:

| COHORT                      | MONTH 0 | MONTH 1 | MONTH 2 | MONTH 3 |
|-----------------------------|---------|---------|---------|---------|
| Organic / Owned Acquisition | 100%    | 31%     | 22%     | 17%     |
| Paid Acquisition            | 100%    | 11%     | 6%      | 4%      |

**By Month 3, organic-acquired customers retain at roughly 4x the rate of paid-acquired customers.** This doesn't mean paid channels aren't worth running — it means the follow-up (email capture, win-back flow, post-purchase incentive) matters more for that cohort than for any other, and right now there's likely no way to tell the two cohorts apart without this kind of tracking in place.

#### ESTIMATED CUSTOMER ACQUISITION COST BY CHANNEL

| CHANNEL                | EST. CAC |
|------------------------|----------|
| Organic / SEO          | \$6      |
| Email / SMS (owned)    | \$3      |
| Paid Social            | \$28     |
| Affiliate / Influencer | \$19     |

Affiliate/influencer spend often looks cheap on a blended CAC basis, but return rates and one-time-buyer churn by channel don't show up in a single CAC number unless retention is tracked by channel, not just by campaign.

⚠ **SAMPLE REPORT** — product, category, and promo figures below are fabricated placeholders for a fictional composite brand.

REVENUE BY CATEGORY

| CATEGORY            | REVENUE   | SHARE  |
|---------------------|-----------|--------|
| Core Line           | \$125,281 | 38.0%  |
| Seasonal Collection | \$72,531  | 22.0%  |
| Accessories         | \$52,750  | 16.0%  |
| Limited Drops       | \$36,266  | 11.0%  |
| Gift Sets           | \$26,375  | 8.0%   |
| Sale / Clearance    | \$16,484  | 5.0%   |
| TOTAL               | \$329,688 | 100.0% |

TOP PRODUCTS — REVENUE & ORDERS

| PRODUCT                | REVENUE  | ORDERS | REV / ORDER |
|------------------------|----------|--------|-------------|
| Top Core SKU           | \$51,200 | 610    | \$84        |
| #2 Core SKU            | \$38,700 | 498    | \$78        |
| Top Seasonal SKU       | \$33,900 | 341    | \$99        |
| #2 Seasonal SKU        | \$26,100 | 279    | \$94        |
| Top Accessory SKU      | \$19,800 | 402    | \$49        |
| Gift Set — Starter     | \$15,600 | 156    | \$100       |
| Limited Drop — Batch 1 | \$12,400 | 98     | \$127       |
| Accessory Add-On       | \$8,900  | 587    | \$15        |

These 8 SKU tiers alone account for an estimated \$206,600 — roughly 62.7% of the month. The accessory add-on tier has the second-highest order count of any line item despite modest average revenue — a signal that add-ons are a bigger demand driver than a straight product comparison suggests.

BUNDLE / ATTACH-RATE OPPORTUNITY

|                       |                             |                            |
|-----------------------|-----------------------------|----------------------------|
| 31.0%                 | 14.0%                       | 55.0%                      |
| ORDERS WITH AN ADD-ON | ORDERS WITH A GIFT WRAP/SET | ORDERS, NO ADD-ON ATTACHED |

With this much of the order base attaching zero accessories, pre-built bundles at a small discount to the sum-of-parts price is a common, low-effort lever to raise AOV without discounting the core product itself.

PROMO CODE EFFECTIVENESS — SITEWIDE CODE

|                                        |                      |                                     |                                     |
|----------------------------------------|----------------------|-------------------------------------|-------------------------------------|
| COST OF THE CODE THIS MONTH            |                      | WHAT A TARGETED CODE WOULD CHANGE   |                                     |
| Orders using code                      | 37.0% (1,783 orders) | Same code, cart-abandon only        | Recovers lost sales                 |
| Total discount given                   | \$21,400             | Same code, first-time visitor only  | Protects repeat-buyer margin        |
| Est. share needed to convert           | 38.0%                | Sitewide evergreen code             | Discounts buyers already converting |
| Est. margin given to full-price buyers | \$13,268             | Recoverable margin, same order vol. | ~\$13,268/mo                        |

WHAT THIS SYSTEM GENERATES FROM YOUR DATA

This report was built entirely on illustrative, synthetic benchmarks for a fictional composite brand — not any real business's numbers. Run from an actual Shopify order export, it produces the same analysis with your real figures, no store access or app install required.

| REPORT                       | WHAT IT SHOWS                                                          | FREQUENCY                            |
|------------------------------|------------------------------------------------------------------------|--------------------------------------|
| Revenue & Retention Snapshot | Revenue, orders, AOV, refund rate, RFM segments, cohort retention      | Monthly                              |
| Product & Promo Review       | Top/bottom SKUs, category mix, bundle opportunities, discount code ROI | Monthly                              |
| Channel & Acquisition Cost   | CAC and lifetime value by traffic source, paid vs. organic split       | Monthly / as-needed after a campaign |

**To generate this report with your actual numbers:** provide a Shopify order export (or read-only collaborator access) for any recent month. Your data stays yours — the first pass is free, no commitment, just to see if there's something real here. **First report turnaround: 48–72 hours** from the time I receive your export.
