

Solar Generation Report

NREL PVWatts — US Residential Solar Analysis

Report Period: February 03 – February 10, 2026 | Prepared by: Mboya Jeffers
Data Sources: NREL PVWatts v8 API, Utility Rates v3 | 130 records analyzed

Executive Summary

This report analyzes solar photovoltaic production potential across 10 US locations using NREL PVWatts v8 simulations. Combined annual AC generation is 0 kWh with an average capacity factor of 16.5%. All systems modeled at 5 kW residential capacity.

Site Comparison

Location Key	Capacity Factor Pct
1451cb0dd2ed5fb7	16.11
1451cb0dd2ed5fb7	16.66
1451cb0dd2ed5fb7	21.10
1451cb0dd2ed5fb7	23.49
1451cb0dd2ed5fb7	24.69
1451cb0dd2ed5fb7	23.75
1451cb0dd2ed5fb7	21.51
1451cb0dd2ed5fb7	21.11
1451cb0dd2ed5fb7	20.31

1451cb0dd2ed5fb7	19.27
1451cb0dd2ed5fb7	16.83
1451cb0dd2ed5fb7	15.91
86e1b5f055098ad3	14.98
86e1b5f055098ad3	15.00
86e1b5f055098ad3	19.24

What to Watch This Week

- Solar irradiance forecasts and cloud cover
- Grid interconnection policy updates
- Net metering rate changes by utility
- Panel efficiency technology developments
