Monthly Production & Compliance Report — Sample Deliverable

500+ wells. 11 states. You recently posted a job for a Data Analyst focused on regulatory and production reporting — monthly summaries, decline curves, and RRC filings. The white glove model delivers exactly that work, every month, at a fraction of the cost of a full-time hire — without the benefits, onboarding, or management overhead.

\$5,500 – \$7,500 / month

MONTHLY RETAINER — ENERGY/O&G ENGINE (MULTI-STATE)

Cost comparison vs. the job posting:

Full-time Data Analyst (salary + benefits): ~\$85,000/year
White glove retainer: \$66,000–\$90,000/year (monthly billing, cancel anytime)
Same deliverables. No benefits, no PTO, no severance, no management overhead. Reports every month regardless of turnover.

What's included every month:

Component	Detail
Monthly production report	EIA + commodity price analysis — what you posted the job for
Weekly commodity pulse (1pg)	WTI, Henry Hub, rig count movement — every Monday morning
3 ad hoc data pulls / month	Custom regulatory or production queries within 24 hours
4-hour response SLA	Business hours async channel (Slack or email)
Monthly 30-min debrief	Walk through report, flag regulatory changes, update KPI set
Custom multi-state build	Reports configured for your specific operating states

What you're looking at:

The following pages are the monthly production and commodity intelligence report your team would receive. EIA production data and Yahoo Finance commodity prices are pulled live at generation — every figure is real and independently verifiable. This is exactly the format your operations team would use.

DATA AUDIT TRAIL

Report generated: 2026-05-31 14:23:57
Production data (EIA API v2): Live — api.eia.gov/v2
Crude production: [/petroleum/crd/crpdn/](#) — NUS, EPC0, MBBL/D
Natural gas: [/natural-gas/prod/sum/](#) — NUS, VGM (marketed), MMCF

WTI spot price (Yahoo Finance): CL=F — finance.yahoo.com

Henry Hub (Yahoo Finance): NG=F — finance.yahoo.com

All data is publicly available and independently verifiable.

Monthly Production & Commodity Intelligence Report

US Crude Production | Natural Gas | WTI | Henry Hub

EIA Monthly Data | 12-Month Trend | YoY Comparison

Report Date: May 31, 2026

WHITE GLOVE DEMO — Live data from EIA API + Yahoo Finance

Data pulled: 2026-05-31 14:23:57

1. Executive Summary

- **US Crude Production:** 13,696 MBBL/D as of 2026-03 — **-0.01% MoM** | 0.00% YoY
- **WTI Price:** \$87.36/bbl | 6-month range: \$55.27 – \$112.95 | 6mo change: **+47.27%**
- **Henry Hub (Natural Gas):** \$3.290/MMBtu | 6-month range: \$2.523 – \$7.460 | 6mo change: **-33.14%**
- **Production trend:** Output contracting — monitor field-level performance
- **Price risk:** WTI volatility at 23.7% (6-month CV) — elevated commodity price risk

2. Commodity Price Dashboard

\$87.36 WTI CRUDE (\$/BBL)	+47.27% WTI 6MO CHANGE	23.7% WTI PRICE VOLATILITY (CV)
\$3.290 HENRY HUB (\$/MMBTU)	-33.14% HENRY HUB 6MO CHANGE	26.1% NG PRICE VOLATILITY (CV)

Price Detail

Commodity	Current	6mo High	6mo Low	6mo Avg	6mo Change	Source
WTI Crude Oil	\$87.36/bbl	\$112.95	\$55.27	\$78.51	+47.27%	Yahoo Finance (CL=F)
Henry Hub Natural Gas	\$3.290/MMBtu	\$7.460	\$2.523	\$3.414	-33.14%	Yahoo Finance (NG=F)

3. US Production Data (EIA)

Crude Oil Field Production (MBBL/D)

Period	Production (MBBL/D)
2026-03	13,696
2026-02	13,697
2026-01	13,305
2025-12	13,657
2025-11	13,789
2025-10	13,864

Source: EIA API — PET.MCRFPUS1.M (US Crude Oil Field Production). Units: MBBL/D (thousand barrels per day). Verifiable at eia.gov.

Key Production Metrics

Metric	Value	Commentary
Latest Production	13,696 MBBL/D	As of 2026-03
Month-over-Month Change	-0.01%	Production declining vs. prior month
Year-over-Year Change	0.00%	Contracting output vs. year ago
12-Month Average	13,668 MBBL/D	Trailing 12-month average production
12-Month High	13,864 MBBL/D	Peak production month in trailing 12 months
12-Month Low	13,305 MBBL/D	Trough production month in trailing 12 months

Natural Gas Marketed Production (MMcf/month)

Period	Production (MMcf)
2026-03	3,789,520
2026-02	3,405,144
2026-01	3,693,462
2025-12	3,800,813
2025-11	3,648,204
2025-10	3,675,081
2025-09	3,587,953
2025-08	3,712,596
2025-07	3,690,277
2025-06	3,547,009

Period	Production (MMcf)
2025-05	3,637,573
2025-04	3,526,099

Source: EIA API — NG.N9070US2.M (US Natural Gas Marketed Production). Units: MMcf/month. Verifiable at eia.gov.

NG Production Metrics

Metric	Value	Commentary
Latest Production	3,789,520 MMcf	Most recent available period
Month-over-Month	+11.29%	Increasing vs. prior month
Year-over-Year	+7.47%	Expanding vs. year ago
12-Month Average	3,642,811 MMcf	Trailing 12-month average

4. Market Risk Assessment

Risk Factor	Level	Commentary
WTI Price Risk	HIGH	WTI volatility (CV) 23.7% — 6-month price range \$55.27–\$112.95/bbl
NG Price Risk	HIGH	Henry Hub CV 26.1% — natural gas markets historically volatile
Production Trend Risk	MEDIUM	US crude output contracting YoY — monitor well-level decline rates
Price vs. Production	LOW	WTI at \$87.36/bbl — above typical breakeven thresholds for most shale plays

5. Operator Intelligence & Watch Items

1. **WTI pricing watch:** At \$87.36/bbl (above \$60 threshold) — production economics favorable across most formations
2. **Henry Hub at \$3.290/MMBtu:** Above summer injection floor — favorable for associated gas economics
3. **Production discipline:** US crude output down 0.0% YoY — operators are holding steady activity
4. **Regulatory calendar:** Verify RRC filings current for all active Texas leases. Monthly production reporting deadlines: 45 days after end of production month.

6. Methodology & Data Sources

Component	Method	Source
US Crude Production	EIA API v2 — /petroleum/crd/crpdn/ — US total, crude oil (EPC0), MMBL/D	eia.gov
Natural Gas Production	EIA API v2 — /natural-gas/prod/sum/ — US marketed production (VGM), MMCF/month	eia.gov
WTI Crude Price	Yahoo Finance Chart API — CL=F (front-month futures), 6-month daily OHLCV	finance.yahoo.com
Henry Hub (NG)	Yahoo Finance Chart API — NG=F (front-month futures), 6-month daily OHLCV	finance.yahoo.com
Price Volatility (CV)	Coefficient of variation: $\sigma(\text{prices}) / \mu(\text{prices}) \times 100$ over 6-month window	Computed
MoM / YoY Changes	EIA monthly production data — period-over-period percentage change	Computed from EIA
Report Period	Latest available EIA monthly data + trailing 6-month commodity prices as of May 31, 2026	—
Data Pull Timestamp	2026-05-31 14:23:57	—

EIA data: US Energy Information Administration (eia.gov). Yahoo Finance commodity data: finance.yahoo.com. All figures publicly verifiable. No synthetic data.

Disclaimer: This is a white glove demo deliverable. All production and pricing data is live and sourced from the EIA and Yahoo Finance at 2026-05-31 14:23:57. Used for demonstration and targeting purposes. This document does not constitute financial advice or investment recommendation.
